## THE JOY OF WRECKS

Giga Wrecker Alt Switch, Xbox One and PS4 £20.99

JAPANESE studio Game Freak is virtually synonomous with the Pokémon franchise but they have some other tricks up their sleeve.

Giga Wrecker Alt blends platforming with a healthy slice of puzzle-solving and a dash of metroidvania to

make an over-the-top anime game that will test your grey matter as well as smash things up.

Your smashing success is key because you have to collect the bits of junk from battles to make objects

that can get you into new areas or solve puzzles.

The main tale is set in a post-apocalyptic 2032 where machines rule and humans are virtually wiped out. You are Reika, a young girl who loses her arm in a battle only to get a robot one that gives her new powers. It's all a bit far-fetched but a strong cast of characters carries it off haracters carries it off.

There is a good-size map, with the standard metroidvania hook that you'll see areas to explore but can't get into them without new skills so you'll need to go back later. It looks lovely with a real cartoon vibe and has a solid soundtrack

The physics system is a bit hit and miss and the camera can be a pain as it suddenly zooms out, eaving you as a tiny spec on the screen.

But it is a neat challenge that shows Game Freak

s more than one string to the bow

The French studio has created a story of wo siblings trying to survive during Hundred Years' War and avoid the Plague. The game starts off well enough. Amicia is a young girl with lofty dreams of becoming a knight. Her younger brother, Hugo, has an illness that no one can cure and he has been locked away from the world.

One day Amicia goes boar hunting with her father and things take a turn for the worst —

man-eating rats. Loads of them. Loads.
As tales go, the core story is a dark coming-of-age tale. It is all about how thugo and Amicia bond and how they work out what family really means and how far you are prepared to go

to protect them.

Gameplay is a blend of stealth and puzzle-solving with a few light

combat sections thrown in along the way. The key, though, is to think like a youngster who is discovering each issue for the first time and working out the best way to attack it.

It is not easy — if you are spotted by an enemy then, on most occasions, it will end with you having to start over again.

Or even worse, you can wander too far from the light and become rat food

Everything has a role within the game which keeps your concentration levels high.

The puzzles are never too hard. They are not sign-posted but are built to be solved with one of your abilities.

If you don't like rats, then stay away.

If you don't like rats, then stay away. here are loads of rats. Loads.

It is fun, if a little twisted, to use them for your benefit.

If they block your path, then you can throw a stone at a light and the little blighters go charging off into the darkness and you can move on.

Throughout the game you'll also get to craft equipment and get a handful of upgrades that can improve your ability to carry things as well as how quitely you walk.

This is a dark, twisted and occasionally horrific game but it has a heart thanks to its wo young stars.

Asobo's decision to have two young leads is a winner. You bond with them. This is a well-different from the norm. And there are rats.

the resources are limited so you don't have the extra worry of thinking about how to use them or preserve them.

Graphically, the game has a striking realism but the lighting system is the star of the show. You'll spend most of your time being in the dark, or lighting up your way forward with dancing shadows.

Then there are the rats. There are loads of them. Loads. And it isn't nice when they are crawling all over you as you wriggle through a tunnel. The sound backs up that feeling of dread as they squeal and claw at the ground around you. It adds to an epic backdrop of noise, complemented by solid voice acting. Amicia and Hugo definitely steal the show on that score.

I was tipped off that a young

She recalled: "I was 15 when I started uploading. People started

should make. "Labels wanted to change my style and appearance in a way I was uncomfortable with. I decided to go

to university instead." She went to Edinburgh Napier to study Popular Music and added: "I've no regrets. I was able to expand my critical thinking and what I

She already knew the band's rapper Dave Hook, aka Solareye, as he's a lecturer at Napier. She said: "It was gotting to play some feeting!" was exciting to play some festivals

"This is how I properly met Samson who now produces me."

I was reintroduced to Rebecca in September when she made a low-

It took me a wee while to twig as she was billed as SHEARS. I think

that was a working title for her solo project, but she's stuck with it and has finally released her stunning debut single Circle Line.

It's a perfect introduction to what

she's about — a fresh slab of classy electro pop. The track was produced by Samson and mixed by Grammynominated Canadian Matty Green, whose credits range from Dua Lipa and Lady Gaga to the latest Weezer Rebecca said: "Circle Line is

about being stuck in a loop, realising and acknowledging that you're in the loop, but going back around anyway regardless of what it might do to you It's about never learning."

After making her "official" live debut at last month's Wide Days
